

Health & Safety Policy

How to Work Safely & Protect Your Health

Our main objective is to create and maintain a safe environment for all who enter the workplace. We work closely with Occupational Health and Safety Legislation, in addition to a plethora of additional commitments and organizations that work in close conjunction with our interests. Proactive attention to work practices is an essential element to this objective. Consistently identifying new and established threats to safety in the workplace is another important element.

How to Manage Workplace Risks & Hazards

Reducing workplace illnesses and injuries is extremely important to us. Involving, empowering, and consulting employees can prove to be an enormously effective means of maintaining optimal standards in the workplace.

Investigation and implementation are two more elements to our practices that should be kept in mind. Implementing preventative measures can stop potential safety threats at the source. Investigating incidents can result in tools and protocol that allow us to create measures for the future. At all times, you can expect all of these processes to be communicated consistently and effectively to all members of and visitors to the workplace.

Ongoing Commitment to Health & Safety

Consistently auditing our own processes can help us to make informed, effective decisions for the future. Setting achievable, actionable goals gives us the ability to maintain optimal safety standards at all times.
